Climate is the long-term average of weather, typically averaged over a period of 30 years. More rigorously, it denotes the mean and variability of meteorological variables over a time spanning from months to millions of years. Some of the meteorological variables that are commonly measured are temperature, humidity, atmospheric pressure, wind, and precipitation.

Climate - Wikipedia
Data Snapshots offers a range of easy-to-understand climate maps with plain English descriptions. Each set of snapshots is a simplified version of official climate products available across a number of different Websites.
