How Did Humans Evolve? - HISTORY
History of the Theory of Evolution The idea that traits are passed down from parents to offspring has been around since the ancient Greek philosophers' time. In the middle 1700s, Carolus Linnaeus came up with his taxonomic naming system, which grouped like species together and implied there was an evolutionary connection between species within the same group.

A Brief Explanation of Evolution -
ThoughtCo

But evolution did not reach the status of being a scientific theory until Darwin's grandson, the more famous Charles Darwin, published his famous book *On the Origin of Species*. Darwin and a scientific

contemporary of his, Alfred Russel Wallace, proposed that evolution occurs because of a phenomenon called natural selection.

Theory of Evolution | National Geographic Society

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

Evolution - Wikipedia

The word evolution (from the Latin

Read Book Evolution The History Of An Idea Peter J

Evolutio, meaning "to unroll like a scroll") was initially used to refer to embryological development; its first use in relation to development of species came in 1762, when Charles Bonnet used it for his concept of "pre-formation," in which females carried a miniature form of all future generations. The term gradually gained a more general meaning of growth or progressive development.

Book, a set of books, or perhaps most of the books that comprise the totality of science! Even the history of the science of evolution is huge, and this page will have to be mostly links to other pages. We will, however, list the most important events on this page with a brief review so that this is practically a timeline of evolution.

Foundation of Evolutionary Thought

History of Evolution

Evolution, theory in biology postulating that the various types of plants, animals, and other living things on Earth have their origin in other preexisting types and that the distinguishable differences are due to modifications in successive generations.

The theory of evolution is one of the fundamental keystones of modern biological theory.. The diversity of the living world is staggering.
