It also gives a brief history of modern emergency management in the United States, highlighting the evolution of major mitigation policies and the mitigation framework. The Disaster Mitigation Act of 2000 (DMA 2000) requires all states, tribal, and local governments to develop hazard mitigation plans (HMPs) as a condition for receiving certain types of federal disaster assistance.

[Hazard Mitigation in Emergency Management | ScienceDirect](#)

Hazard mitigation planning reduces loss of life and property by minimizing the impact of disasters. It begins with state, tribal and local governments identifying natural disaster risks and vulnerabilities that are common in their area. After identifying these risks, they develop long-term strategies for protecting people and property from future events .

Hazard mitigation aims to reduce losses from future disasters. It is a process in which hazards are identified and profiled, the people and facilities at risk are analyzed, and mitigation actions to reduce or eliminate hazard risk are developed. The implementation of the mitigation actions, which include short and long-term strategies that may involve planning, policy changes, programs, projects, and other activities, is the end result of this process.

Mitigation is any sustained action taken to reduce or eliminate the long-term risk to human life and property from hazard events. It is a continuous process that occurs before, during and after disasters, and serves to break the cycle of damage and repair in hazardous areas. It is estimated that for every dollar spent on mitigation, \$4 dollars in future damages can be avoided.

[First round of Hazard Mitigation Grants announced](#)

Hazard mitigation is the effort to reduce loss of life and property by lessening the potential impact of future disasters. Mitigation planning is a key process to break the cycle of disaster damage, reconstruction and repeated damage. It allows local leaders to take action now, before a disaster, to reduce impacts when a disaster occurs.
