Introduction to Stochastic Processes

Syllabus: (Probability Theory III) Discrete Markov chains with countable state space. Classification of states-recurrences, transience, periodicity. Stationary distributions, reversible chains. Several illustrations including the Gamblers Ruin problem, queuing chains, birth and death chains etc. Poisson process, continuous time markov chain with countable state space, continuous time birth and ...

Course Archives: Theoretical Statistics and Mathematics ...

Solution to Problem 1.19. Let A_i be the event that Alice does not find her paper in drawer i . Since the paper is in drawer i with probability p_i , and her search is successful with probability d_i , the multiplication rule yields $P(A_i) = p_i d_i$, so that $P(A) = 1 - \sum p_i d_i$. Let B_j be the event that the paper is in drawer j .
