The Rogue G10 is a ten-water with a single 5-inch speaker. Ten watts can be enough as long as you understand what that exactly means. You can't really expect to play for an audience with this thing - it will even struggle to follow a pair of drums, but it's also important to remember that this amp was not really made for that purpose.

What Is A Power Amp? A power amp is the section of a guitar amplifier that is able to actually "amplify" sound. It comes after the preamp and after an amp's effects loop (if it has one). So when it comes to your overall signal chain, the power amp is therefore one of the last stages to affect and influence your guitar's sound.

H-infinity engineering continues to establish itself as a discipline of applied mathematics. As such, this extensively illustrated monograph makes a significant application of H-infinity theory to electronic amplifier design, demonstrating how recent developments in H-infinity engineering equip amplifier designers with new tools and avenues for research. The presentation, at the interface of applied mathematics and engineering, emphasizes how to (1) compute the best possible performance available from any matching circuits; (2) benchmark existing matching solutions; and (3) generalize results to multiple amplifiers. As the monograph develops, many research directions are pointed out for both disciplines. The physical meaning of a mathematical problem is made explicit for the mathematician, while circuit problems are presented in the H-infinity framework for the engineer. A final chapter organizes these research topics into a collection of open problems ranging from electrical engineering, numerical implementations, and generalizations to H-infinity theory.

"Heart-stopping and relentlessly gripping. Tabor takes us on an odyssey into unfathomable worlds beneath us, and into the hearts of rare explorers who will do anything to get there first."--Robert Kurson, author of ShadowDivers In 2004, two great scientist-explorers attempted to find the bottom of the world. American Bill Stone took on the vast, deadly Cheve Cave in southern Mexico. Ukrainian Alexander Klimchouk targeted Krubera, a freezing nightmare of a supercave in the war-torn former Soviet republic of Georgia. Both men spent months almost two vertical miles deep, contending with thousand-foot drops, raging whitewater rivers, monstrous waterfalls, mile-long belly crawls, and the psychological horrors produced by weeks in absolute darkness, beyond all hope of rescue. Based on his unprecedented access to logs and journals as well as hours of personal interviews, James Tabor has crafted a thrilling exploration of man's timeless urge to discover--and of two extraordinary men whose pursuit of greatness led them to the heights of triumph and the depths of tragedy. Blind Descent is an unforgettable addition to the classic literature of true-life adventure, and a testament to human survival and endurance. "Holds the reader to his seat, containing dangers aplenty with deadly falls, killer microbes, sudden burial, asphyxiation, claustrophobia, anxiety, and hallucinations far underneath the ground in a lightless world. Using a pulse-pounding narrative, this is tense real-life adventure pitting two master cavers mirroring the cold war with very uncommonly high stakes."--Publishers Weekly (starred review) "A fascinating and informative introduction to the sport of cave diving, as well as a dramatic portrayal of a significant man-vs.-nature conflict. . . . What counts is Tabor's knack for maximizing dramatic potential, while also managing to be informative and attentive to the major personalities associated with the most important cave explorations of the last two decades."--Kirkus Reviews

Physics of Geomagnetic Phenomena, Volume I is a comprehensive, balanced, and authoritative introductory text to geomagnetism. The book is divided into three parts encompassing 11 chapters that discuss the advances in geomagnetism, the generation of geomagnetic field phenomena, and the geomagnetic storm generation mechanisms. The first part of the book covers the history, instrumentation, local anomalies, and different types of indices of geomagnetism. The second part discusses the paleomagnetic data for the direction and intensity of the geomagnetic field in ancient times, and then presents an outline of the theoretical interpretations of the main paleomagnetic results. This part also examines earth's main geomagnetic field and electromagnetic induction. The third part describes the morphologies of solar quiet and lunar daily variations on individual days and on the average, including the methods of obtaining current systems responsible for these variations and their results. Discussions on the geomagnetic variations in the equatorial zone; the neutral atmosphere and the quiet ionosphere; and the various geomagnetic and ionospheric phenomena are also provided.

Then he dabbed his finger with the blood from his lip. "My blood, shed for you," he whispered. She took his finger into her mouth and curled tongue, aroused, tasting of the salty, tangy iron. Then she leaned over to kiss him.--From Of Christ and Orwell Delve into the unconventional imagination of Tigre Scott, filled with short stories of relationships of different flavors, all written from the heart, mind and groin. Often poetic and lyrical, and, at times, humorous, Scott captures emotion and thought, while venturing into uncharted territories. Several of Scott's stories have been work-shopped on Zoetrope.com, an on-line magazine created by Francis Coppola. Real Doll received a high score from reviewers for its originality, while others considered The Big Drop and Human Wreckage as "excellent" and "well-written" stories. Scott goes beneath the surface of his characters' external worlds, providing both clarity and meaning behind their motivations, dreams and aspirations.
